

*A haven for romantics and nature lovers, this icon offers a rare tranquility within the ever-eclectic energy that defines NYC.
You could forget you're in the middle of Manhattan!*

Loeb Boathouse, Central Park, NY

The use of a NanaWall System represents an aesthetically pleasing, engineered solution for the large opening at the Boathouse. It incorporated a new design concept that is based on the idea that people's essential connection to nature can support ideal functionality in individuals having positive effects upon cognitive performance, concentration, stress reduction, and overall mood enhancement.

When the NanaWall system is open, the visual and physical elements are enhanced allowing customers to enjoy the sights and sounds of Central Park.

The HVAC system upgrade included the replacement of the perimeter hydronic heating system making it more comfortable for restaurant customers.

The NanaWall system and structural engineering design enables an expansive view; providing restaurant-goers and staff a visual connection with nature.

NanaWall panels aid in protecting against extreme temperatures
